1. **ERP Strategy: ERP to the Cloud Roadmap**

   It is clear that UCF and other Oracle-PeopleSoft customers must migrate to a cloud-based ERP platform by (approximately) 2030. Estimates of the total investment required to support this transition exceed $50 million. We own significant unimplemented PeopleSoft functionality: process enhancements, self-service capabilities, and user interface improvements.

   - What must we do to reach the point where we are ready to migrate to the cloud?
   - When must we begin the transition?
   - Should we invest in PeopleSoft enhancements (e.g., time and labor) the meantime?

2. **Governance Strategies for Balancing Capacity and Demand**

   How can IT governance, in collaboration with UCF IT and executive leadership, help determine the most valuable technology projects and pursuits within the scope of available people, time, and money? What project commitments and investments will yield the highest value for the university and its goals? Do we have sufficient human and capital IT resources to support UCF at its present scale and trajectory? What is the impact if we don’t?

3. **Getting from Run to Grow and Transform**

   **Examples: DataSite Orlando (DSO) and Streamlined Client Experience Program (SCEP)**

   DSO and SCEP are current collaborative initiatives that will create value for UCF and for employees throughout the university. They are also examples of efforts to shift from “run” to “grow and transform.” The status and expected outcomes of these transformative initiatives will be discussed. Can we develop more projects like these?
